Phenol Red Indicator

Intended Use:
It is recommended as pH indicator which helps in monitoring of the pH changes in the cell culture.

Composition**

Ingredients
- Phenol red sodium salt: 0.04gm
- Distilled water: 100.0ml

Note: Grind the indicator in mortar and then dilute to 100ml by using distilled water.

**Formula adjusted, standardized to suit performance parameters

Principle And Interpretation
Phenol red is a pH indicator frequently used in cell biology laboratories. Its color exhibits a gradual transition from yellow to red over the pH range 6.8 to 8.2. Above pH 8.2, phenol red turns a bright pink (fuchsia) color.

Warning and Precautions
In Vitro diagnostic use only. Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling clinical specimens. Safety guidelines may be referred in individual safety data sheets.

Performance and Evaluation
Performance of the product is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

Quality Control
Appearance
Reddish orange coloured solution.

Clarity
Clear without any particles.

Reaction
At pH 6.8 the indicator is yellow and at pH 8.4, the indicator turns red.

Sensitivity (As per IP)
A mixture of 0.1ml of the solution and 100ml of carbondioxide-free water is yellow. Not more than 0.1ml of 0.02M sodium hydroxide is required to change the colour of the solution to reddish violet.

Storage and Shelf Life
Store between 10-30°C in tightly closed container and away from bright light. Use before expiry date on label. On opening, product should be properly stored in dry ventilated area protected from extremes of temperature and sources of ignition. Seal the container tightly after use.

Disposal
User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (2,3).
