Candida Medium

Candida Medium is used for cultivating *Candida* species.

**Composition**

<table>

<tr>
<td>Agar</td>
<td>15.000</td>
</tr>
<tr>
<td>Final pH (at 25°C)</td>
<td>7.6±0.2</td>
</tr>
</tbody>
</table>

**Formula adjusted, standardized to suit performance parameters**

**Directions**

Suspend 35.5 grams in 1000 ml distilled water. Heat to boiling to dissolve the medium completely. DO NOT AUTOCLAVE. Cool to 50 - 52°C and aseptically add 0.3 units of Penicillin and 25 µg Streptomycin per ml of sterile medium. Mix well and pour into sterile Petri plates.

**Principle And Interpretation**

*Candida* is a genus of yeasts responsible for infections such as oropharyngeal candidiasis, vaginal candidiasis and candidemia. Candida Medium is used for the selective cultivation and differentiation of *Candida* species. Candida Medium was originally developed by Nickerson (1). It is also used for processing and inoculation of specimens like tissues, skin scrapings, nails and hair (2, 3).

Mycological peptone in the medium provides essential nitrogenous nutrients while dextrose acts as carbon source and phosphate maintains buffering action of medium. This medium also contains sodium sulphite, which is reduced by *Candida* species to form sulphide. Bismuth in the medium combines with the sulphide to produce brown to black pigmented colonies and zones of dark precipitate in the medium surrounding the colonies of some species. Bismuth sulphite also acts as an inhibitor of bacterial growth. Selectivity of medium is increased by incorporation of penicillin and streptomycin in the medium, which helps to suppress the growth of many bacteria.

Differentiation of *Candida* is based on the growth patterns and pigmentation of isolated colonies.

**Quality Control**

**Appearance**

Cream to yellow homogeneous free flowing powder

**Gelling**

Firm, comparable with 1.5% Agar gel

**Colour and Clarity of prepared medium**

Light yellow coloured, clear to slightly opalescent gel forms in Petri plates

**Reaction**

Reaction of 3.55% w/v aqueous solution at 25°C. pH : 7.6±0.2

**pH**

7.40-7.80

**Cultural Response**

M104: Cultural characteristics observed after an incubation at 30°C for 24-48 hours.

Please refer disclaimer Overleaf.
**Candida albicans ATCC 10231**
50-100 good-luxuriant >=50%

**Candida tropicalis ATCC 1369**
50-100 good-luxuriant >=50%

**Escherichia coli ATCC 25922**
>=10³ inhibited 0%

**Storage and Shelf Life**
Store below 30°C in tightly closed container and the prepared medium at 2-8°C. Use before expiry date on the label.
