Formate Ricinoleate Broth

Formate Ricinoleate Broth is recommended for detection of coliform bacteria in milk, water and other material of sanitary importance.

**Composition**

</tr>
</tbody>
</table>

**Directions**

Suspend 16 grams in 1000 ml distilled water. Heat if necessary to dissolve the medium completely. For inoculum volume greater than one ml, use double strength medium. Distribute in tubes with inverted Durhams tubes. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes.

**Principle And Interpretation**

The existence of coliforms in dairy products is suggestive of unsanitary conditions or practices during production processing or storage. *Escherichia coli* is a member of the coliform group and is used as an indicator organism, presence of which is suggestive of faecal contamination. This is because coliforms including *E. coli* are normally found in the intestinal tracts of humans and many warm blooded animals (1).

Formate Ricinoleate Broth is used for detecting coliforms in milk, water and other material of sanitary importance. This medium was devised by Stark and England (2) and is recommended for use in the manner specified in Standard Methods for the Examination of Water and Wastewater (3) and in Standard Methods for the Examination of Dairy Products (4).

Ordinarily three to five tubes of medium are used for each specimen. Inoculated cultures are incubated for 48 hours at 35°C. Formation of gas within 48 hours is considered evidence of the presence of coliform bacilli.

Gelatin peptone supply essential nitrogenous nutrients to the coliforms for their growth while lactose is the carbon source. Sodium formate maintains buffering conditions of the medium and also accelerates growth and gas production of *Escherichia coli* and related organisms. Sodium ricinoleate is a sodium salt of 11 Hydroxyheptadec-8-ene-1-Carboxylic acid which suppresses the growth of contaminating organisms especially gram-positive bacteria. It is interesting to note that gas production appears earlier in this medium than in other media under same conditions.

**Quality Control**

**Appearance**

Light yellow to light brown homogeneous free flowing powder

**Colour and Clarity of prepared medium**

Whitish opalescent solution with slight precipitate.

**Reaction**

Reaction of 1.6 % w/v aqueous solution at 25°C. pH : 7.4±0.2

**pH**

7.20-7.60

**Cultural Response**

M123: Cultural characteristics observed after an incubation at 35-37°C for 18-24 hours.

</table>
**Enterobacter aerogenes** (ATCC 13048) 50-100 good-luxuriant positive reaction

**Escherichia coli** (ATCC 25922) 50-100 good-luxuriant positive reaction

**Salmonella Typhi** (ATCC 6539) $\geq 10^3$ inhibited

**Staphylococcus aureus** (ATCC 25923) $\geq 10^3$ inhibited

**Bacillus subtilis** (ATCC 6633) $\geq 10^3$ inhibited

**Storage and Shelf Life**
Store below 30°C in tightly closed container and the prepared medium at 2 - 8°C. Use before expiry date on the label.
