Cronobacter Screening Broth

**Intended use**
Cronobacter Screening Broth is recommended for screening Cronobacter (formerly Enterobacter sakazakii) from food and environmental samples.

**Composition**

</tbody>
</table>

**Directions**
Suspend 28.0 grams in 1000 ml distilled water. Heat if necessary to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. Aseptically add the contents of 1 vial of Vancomycin supplement (FD233). Mix well and dispense into sterile test tubes or flasks as desired.

**Principle And Interpretation**
*Cronobacter* (formerly *Enterobacter sakazakii*) are gram-negative rod-shaped *Enterobacteriaceae* that have been implicated in outbreaks of disease causing sepsis, meningitis and necrotising enterocolitis. *Cronobacter* species have also been isolated from powdered infant formula as high tolerance to desiccation provides a competitive advantage in dry environments increasing the risk of contamination. *Cronobacter Screening Broth* was specifically designed by Iversen et al.

Peptone and HM extract provide carbonaceous, nitrogenous compounds, long chain amino acids and other essential nutrients. Sodium chloride maintains osmotic equilibrium. Sucrose present is fermented by *Cronobacter*. Consequently the broth turns yellow after incubation.

**Type of specimen**
Food and dairy samples; Environmental samples

**Specimen Collection and Handling**
For food and dairy samples, follow appropriate techniques for sample collection and processing as per guidelines. After use, contaminated materials must be sterilized by autoclaving before discarding.

**Warning and Precautions:**
Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/ face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling specimens. Safety guidelines may be referred in individual safety data sheets.

**Limitations:**
1. Biochemical test must be carried out for confirmation.

**Performance and Evaluation**
Performance of the medium is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

**Quality Control**
**Appearance**
Cream to yellow homogeneous free flowing powder
**Colour and Clarity of prepared medium**

Purple coloured clear solution forms in tubes.

**Reaction**

Reaction of 2.8% w/v aqueous solution at 25°C. pH : 7.4±0.2

**pH**

7.20-7.60

**Cultural Response**

Cultural characteristics observed with added Vancomycin Supplement (FD233), after an incubation at 35-37°C for 18-24 hours.

Key : *Corresponding WDCM numbers.

**Storage and Shelf Life**

Store between 10-30°C in a tightly closed container and the prepared medium at 2-8°C. Use before expiry date on the label. On opening, product should be properly stored dry, after tightly capping the bottle inorder to prevent lump formation due to the hygroscopic nature of the product. Improper storage of the product may lead to lump formation. Store in dry ventilated area protected from extremes of temperature and sources of ignition Seal the container tightly after use. Use before expiry date on the label.

Product performance is best if used within stated expiry period.

**Disposal**

User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (4,5).
