HiCrome Malassezia Agar (Twin Pack)  

**Intended use**
For isolation, cultivation and identification of *Malassezia furfur* from clinical samples.

**Composition**

**Formula adjusted, standardized to suit performance parameters**

**Directions**
Suspend 15ml of fluid Part B in 1000 ml distilled/purified water. Add 46.4 grams of Part A. Mix well and heat to boiling to dissolve the medium completely. DO NOT AUTOCLAVE. Cool to 45-50°C. Mix well and pour into sterile Petri plates.

**Principle And Interpretation**
*Malassezia* is a genus of fungi, naturally found on the skin surfaces of many animals, including humans. Media based on malt extract is appreciated by many microbiologists due to their richness and nutrient balance especially for the cultivation of fastidious microorganisms. With acidic pH, they are used for the isolation, cultivation and maintenance of yeast and moulds. *M. furfur* is a lipophilic yeast, therefore in vitro growth must be stimulated by natural oils or other fatty substances. Peptone special provides nitrogenous and carbonaceous compounds, long chain amino acids, vitamins and other essential growth nutrients. Low pH favours fungal growth and inhibits contaminating bacteria from test samples (1). Tween 40, Glycerol enhances the growth of *Malassezia* species as it is a lipophilic yeast. Some pathogenic fungi may produce infective spores which are easily dispersed in air, so examination should be carried out in safety cabinet. For heavily contaminated samples, the plate must be supplemented with inhibitory agents for inhibiting bacterial growth with lower pH.

**Type of specimen**
Clinical samples - Skin samples

**Specimen Collection and Handling:**
For clinical samples follow appropriate techniques for handling specimens as per established guidelines (2,3). After use, contaminated materials must be sterilized by autoclaving before discarding.

**Warning and Precautions:**
In Vitro diagnostic Use only. Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling clinical specimens. Safety guidelines may be referred in individual safety data sheets.

**Limitations:**
Due to nutritional variation, some strains may show poor growth.
Performance and Evaluation
Performance of the medium is expected when used as per the direction on the label within expiry period when stored at the recommended temperature.

Quality Control
Appearance
Part A : Cream to yellow homogeneous free flowing powder Part B: Colourless to pale yellow viscous solution

Gelling
Firm, comparable with 1.5% Agar gel.

Colour and Clarity of prepared medium
Yellow coloured, opalescent gel with scum forms in Petri plates.

Reaction
Reaction of 4.64% w/v aqueous solution of Part A and 1.5% v/v of Part B at 25°C. pH : 5.80±0.2

pH
5.60-6.00

Cultural Response
Cultural characteristics observed after an incubation at 35-37°C for 48-72 hours.

Storage and Shelf Life
Store between 2-8°C in a tightly closed container and the prepared medium at 2-8°C. Use before expiry date on the label. On opening, product should be properly stored dry, after tightly capping the bottle inorder to prevent lump formation due to the hygroscopic nature of the product. Improper storage of the product may lead to lump formation. Store in dry ventilated area protected from extremes of temperature and sources of ignition Seal the container tightly after use. Use before expiry date on the label.

Product performance is best if used within stated expiry period.

Disposal
User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (2,3).
