SM Growth powder

Intended use
SM Growth powder is used for cultivation dairy organisms and differentiation of Clostridium species.

**Formula adjusted, standardized to suit performance parameters

Directions
Suspend 100.0 grams in a little amount of purified / distilled water to make a smooth paste. Gradually add more distilled water to make a final volume of 1000 ml. Dispense and sterilize by autoclaving at 15 lbs pressure (121°C) for 5 minutes.

Principle And Interpretation
SM powder is used for the demonstration of coagulation and proteolysis of casein (2). SM powder is sometimes used as a complete medium or as an ingredient in other media used for propagation of organisms occurring in milk products like Mycobacterium tuberculosis, Corynebacterium diphtheriae etc. Addition of SM powder to any nutrient-rich medium creates favorable conditions for growth of organisms, which are encountered in milk. The number of bacteria isolated thus is more than the number of organisms isolated on a regular medium (6).

Proteolytic bacteria hydrolyze casein to form soluble nitrogenous compounds indicated as clear zone surrounding the colonies on the agar medium. More clear zones are seen on milk agar if, the bacteria produce acid from fermentable carbohydrates in the medium. In case of SM powder, proteolytic organisms hydrolyze and form a clear solution with the precipitation at the bottom of the tube. SM powder serves as the purpose.

Type of specimen
Food and dairy samples.

Specimen Collection and Handling
For food and dairy samples, follow appropriate techniques for sample collection and processing as per guidelines (1,5,7). After use, contaminated materials must be sterilized by autoclaving before discarding.

Warning and Precautions:
Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/ face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling specimens. Safety guidelines may be referred in individual safety data sheets.

Limitations:
1. Overheating may lead to coagulation of medium.

Performance and Evaluation
Performance of the medium is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

Quality Control
Appearance
White to cream homogeneous free flowing powder

Colour and Clarity of prepared medium
Off white coloured opaque solution in tubes

Cultural Response
Cultural characteristics observed after an incubation at 35-37°C for 18-24 hours.

**Chemical Analysis**

- Total Nitrogen (anhydrous basis) : >= 4.70%
- Total Protein (anhydrous basis) : >= 35.00%
- Water (K.F.) : <= 10.00%
- Sulphated ash : <= 10.00%
- Fat content : <= 1.50%

**Storage and Shelf Life**

Store between 10-30°C in a tightly closed container and the prepared medium at 2-8°C. Use before expiry date on the label. On opening, product should be properly stored dry, after tightly capping the bottle in order to prevent lump formation due to the hygroscopic nature of the product. Improper storage of the product may lead to lump formation. Store in dry ventilated area protected from extremes of temperature and sources of ignition. Seal the container tightly after use. Use before expiry date on the label. Product performance is best if used within stated expiry period.

**Disposal**

User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (3,4).
