Nutrient Agar w/Trypan blue

**Intended use**
Nutrient Agar w/Trypan blue is recommended for detection and enumeration of aerobic endospore formers from water samples by membrane filtration.

**Composition**

**Directions**
Suspend 23.02 grams in 1000 ml distilled water. Heat to boiling to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. Cool to 45-50°C. Mix well and pour into sterile Petri plates.

**Principle And Interpretation**
Endospores are formed by certain genera of bacteria, commonly found in soil and water samples. Under favourable conditions of growth medium, endospores are readily converted to vegetative cells. Nutrient Agar with Trypan blue is recommended for the detection of aerobic endospores from water samples by APHA (1). The water samples under test is exposed to heat treatment wherein vegetative cells are destroyed and aerobic spores remain unaffected. The water sample is then filtered through membrane filter and placed on Agar plate. Incubate at 35±0.5°C for 24 ± 2 hours. Further incubation up to 5-7 days for intracellular formation of endospores. Count the number colonies as aerobic endospores. The colonies should be catalase positive.

Peptone and HM peptone B provide the necessary nitrogen compounds, carbon, long chain amino acids, vitamins and also some trace ingredients necessary for the growth of bacteria. Trypan blue is added to impart a coloured background to the membrane. The aerobic endospores can be easily visualized.

**Type of specimen**
Water samples

**Specimen Collection and Handling**
For water samples, follow appropriate techniques for sample collection, processing as per guidelines and local standards (1). After use, contaminated materials must be sterilized by autoclaving before discarding.

**Warning and Precautions**:
In Vitro diagnostic Use only. Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/ face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling specimens. Safety guidelines may be referred in individual safety data sheets.

**Limitations**:
This medium is recommended for enumeration of aerobic endospore formers. Further biochemical tests must be carried out for confirmation.

**Performance and Evaluation**
Performance of the medium is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

Please refer disclaimer Overleaf.
Quality Control

Appearance
Light yellow to blue homogeneous free flowing powder

Gelling
Firm, comparable with 1.5% Agar gel

Colour and Clarity of prepared medium
Light blue coloured clear to slightly opalescent gel forms in Petri plates

Reaction
Reaction of 2.3% w/v aqueous solution at 25°C. pH : 6.8±0.2

pH
6.60 - 7.00

Cultural Response
Cultural characteristics observed after an incubation at 35±0.5°C for 22-26 hours.

Cultural Response

Storage and Shelf Life
Store between 10-30°C in a tightly closed container and the prepared medium at 20-30°C. Use before expiry date on the label. On opening, product should be properly stored dry, after tightly capping the bottle inorder to prevent lump formation due to the hygroscopic nature of the product. Improper storage of the product may lead to lump formation. Store in dry ventilated area protected from extremes of temperature and sources of ignition Seal the container tightly after use. Use before expiry date on the label. Product performance is best if used within stated expiry period.

Disposal
User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with sample must be decontaminated and disposed of in accordance with current laboratory techniques (2,3).
