CL Broth (Chopped Liver Broth)

Intended Use:
Recommended for the cultivation and enrichment of anaerobic bacteria from food specimen.

Composition**

**Formula adjusted, standardized to suit performance parameters

# Equivalent to Fresh lean, beef liver

Directions
Suspend 11.2 grams in 100 ml purified / distilled water. Mix thoroughly to wet and allow the mixture to soak for 15 minutes. Dispense in tubes or flasks as desired. Sterilize by autoclaving at 15 lbs pressure (121°C) for 20 minutes. Exhaust for 20 minutes in free flowing steam before use.

Principle And Interpretation

Clostridium species are one of the major causes of food poisoning and gastrointestinal illnesses. They are gram-positive, spore-forming rods that occur naturally in soil. Among the family are: Clostridium botulinum, which produces one of the most potent toxins in existence; Clostridium tetani, causative agent of tetanus; and Clostridium perfringens, commonly found in wound infections and diarrhoea cases. The use of toxins to damage host cells is a method deployed by many bacterial pathogens. The major virulence factor of C. perfringens is the CPE enterotoxin, which is secreted upon invasion of the host gut, and contributes to food poisoning and other gastrointestinal illnesses. Chopped Liver Broth is formulated in accordance with APHA (5) and is recommended by FDA (2) for cultivation and enrichment of Clostridium species from foods.

HL Peptone B solids and peptone provide nitrogen and other nutrients necessary to support bacterial growth. Dipotassium phosphate provides buffering to the medium. Starch acts as a source of carbon. Liquid foods are directly inoculated whereas solid foods are grinded first and then inoculated into this enrichment medium. 1 to 2 grams of solid or 1 to 2 ml of liquid food is added per 15 ml of enrichment broth and incubation is carried out at 26 to 28°C for upto 7 days. If no growth is observed after 7 days the culture medium is further incubated for 10 days to allow delayed germination of spores.

Type of specimen
Water samples; Food samples

Specimen Collection and Handling:
For water samples, follow appropriate techniques for sample collection, processing as per guidelines and local standards (1).
For food samples, follow appropriate techniques for sample collection and processing as per guidelines (5).

After use, contaminated materials must be sterilized by autoclaving before discarding.

Warning and Precautions
Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/ face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling clinical specimens. Safety guidelines may be referred in individual safety data sheets.
**Limitations**

1. Further biochemical tests must be carried out for further identification.
2. Due to variable nutritional requirements, some strains may show poor growth on this medium.

**Performance and Evaluation**

Performance of the medium is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

**Quality Control**

**Appearance**

Light yellow to light brown homogeneous free flowing powder

**Colour and Clarity of prepared medium**

Dark amber coloured, opalescent solution with slight precipitate

**Reaction**

Reaction of 11.2% w/v aqueous solution at 25°C. pH : 7.0±0.2

**pH**

6.80-7.20

**Cultural Response**

Cultural characteristics observed under anaerobic condition, after an incubation at 35-37°C for 18-48 hours.

**Storage and Shelf Life**

Store dehydrated medium between 10-30°C and prepared medium between 2-8°C in a tightly closed. Use before expiry date on the label. On opening, product should be properly stored dry, after tightly capping the bottle in order to prevent lump formation due to the hygroscopic nature of the product. Improper storage of the product may lead to lump formation. Store in dry ventilated area protected from extremes of temperature and sources of ignition. Seal the container tightly after use. Use before expiry date on the label. Product performance is best if used within stated expiry period.

**Disposal**

User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (3,4).
