Description:

*Cronobacter sakazakii* is a Gram-negative, rod-shaped, pathogenic bacterium. Cronobacter multi species complex (formerly *Enterobacter sakazakii*) is a group of gram-negative bacteria that exists in the environment and can survive in very dry conditions.

*Cronobacter sakazakii* has been found in a variety of dry foods including powdered infant formula, skimmed milk powder, herbal teas, and starches. It has also been found in wastewater. Cronobacter illnesses are rare, but they are frequently lethal for infants and can be serious among people with immune compromising conditions and the elderly. It has been associated with neonatal meningitis, necrotizing enter colitis (NEC- portions of the bowel undergo necrosis) etc. Complications include neurological disorders. Mortality rates have been reported to range from 20% to as high as 50% or more.

*C. sakazakii* is generally detected in foods, environment and in clinical samples by using traditional and molecular biology methods. Specific and faster methods for detection of foodborne pathogens, such as real–time PCR, are the need of an hour. These techniques help to detect targeted pathogens quickly; this early and precise detection helps to take further actions.

**NOTE:** The Cronobacter sakazakii Detection Kit (Real-Time) is for in vitro use only.

Principle:

The Cronobacter sakazakii Detection Kit (Real-time) is designed for detection of specific ITS sequence of tRNA-Glu gene (285bp) G Operon of Cronobacter sakazakii. The tRNA-Glu gene of Cronobacter sakazakii contains sequences unique to this genus and has been proved as a suitable PCR target with potential diagnostic application. Cronobacter sakazakii Detection Kit (Real-time) allows rapid, sensitive and specific detection of *Cronobacter sakazakii*.

Real-time Polymerase Chain Reaction, also called quantitative Polymerase Chain Reaction (qPCR) or kinetic Polymerase Chain Reaction, is a laboratory technique based on the principle of Polymerase Chain Reaction. This technique is used to amplify and simultaneously quantitate a targeted DNA sequence. Real-time PCR systems based on SYBr Green assays have increasingly been used for accurate, reliable detection and quantitation of various food-borne pathogens. HI Media's Cronobacter sakazakii Detection Kit (Real-time) is one such SYBr green based qPCR technique which allows amplification of tRNA-Glu gene.
A) Diagrammatic representation of preferential binding of SYBr Green Dye to specific DNA fragments in real-time PCR.

a) Dye in solution emits low fluorescence  
b) Emission of the fluorescence by binding  
c) Amplification data

SYBr Green dye cycles between an unbound (Denaturation step) and a bound (Annealing through Extension) state as the reaction progresses. Signal intensity increases as the quantity of amplicons increase in later cycles indicating amplification. During elongation, more and more dye molecules bind to the newly synthesized DNA. If the reaction is monitored continuously, an increase in fluorescence is viewed in real-time. Upon denaturation of the DNA for the next heating cycle, the dye molecules are released and the fluorescence signal falls.

Keys:
- SYBr
- Forward primer
- Reverse primer
- DNA Strand

Features:
- Fast and simple
- Sensitive and specific results
- Guaranteed reproducible results
- Rapid detection of all relevant clinical pathogens

Kit Contents:
The provided PCR kit contains:

<table>
<thead>
<tr>
<th>Components</th>
<th>Reagents provided for 10R (reactions)*</th>
<th>Reagents provided for 25R (reactions)*</th>
<th>Reagents provided for 50R (reactions)*</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hi-SYBr master mix (2X master mix containing SYBr Green, Assay buffer, Taq Polymerase, MgCl₂, dNTPs) (MBT074)</td>
<td>150 µl</td>
<td>400 µl</td>
<td>700 µl</td>
</tr>
<tr>
<td>Primer Mix</td>
<td>25 µl</td>
<td>60 µl</td>
<td>120 µl</td>
</tr>
<tr>
<td>Nuclease free water (ML065)</td>
<td>1 ml</td>
<td>2 ml</td>
<td>4 ml</td>
</tr>
</tbody>
</table>

* For a 20µl PCR reaction
General Preparation Instructions:
- Before use, all PCR components should be completely thawed on ice (4°C).
- Perform the amplification reactions in a clean area, preferably in a biosafety cabinet.
- Use of aerosol barrier pipette tips is recommended to reduce contamination risks from extraneous DNA templates.
- Extract and store positive control sample (if used) separately from all other reagents to avoid contamination and add it to the reaction mix in a separate area.

Sampling and Handling:
Sample Preparation:
Various food, clinical and environmental samples and cultured bacteria are routinely examined.

For extraction and purification of pure bacterial DNA for high yield, perform the nucleic acid purification using HiMedia’s HiPurA™ Bacterial Genomic DNA Purification Kit (MB505) as instructed in the protocol.

**Flow Chart for setting up PCR Reaction**

1. Add 10µl Hi-SYBr master mix (MBT074) in a PCR tube
2. Add 2 µl the Primer mix (Final concentration 10 pmoles provided)
3. Add 1-2 µl template DNA (upto 50 ng of extracted DNA)
4. Add nuclease free water (ML065) to make the final volume to 20 µl
5. Centrifuge the tube briefly at 6000 rpm for about 10 seconds.
6. Place the tubes in real-time PCR machine and set the recommended PCR program
7. Interpret the data from the amplification plot (observe the Ct values)

**Recommended PCR program:**
1. Initial denaturation : 95°C for 10 minutes
2. Cycling Parameters (No. of cycles: 30)
   - Denaturation : 95°C for 45 seconds
   - Annealing : 58°C for 30 seconds
   - Extension : 72°C for 30 seconds
3. Final Extension : 72°C for 10 minutes.
**Amplification Data:**

**Figure B:** Data representing real-time amplification data of *Cronobacter sakazakii* with Ct values (provided in table)

<table>
<thead>
<tr>
<th>Sr. No.</th>
<th>Sample Description</th>
<th>Ct value</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Negative control</td>
<td>N/A</td>
</tr>
<tr>
<td>2</td>
<td>1 µl of template DNA (amplicon of <em>Cronobacter sakazakii</em>)</td>
<td>14.19</td>
</tr>
<tr>
<td>3</td>
<td>1 µl of template DNA (amplicon of <em>Cronobacter sakazakii</em>)</td>
<td>14.21</td>
</tr>
</tbody>
</table>

**Sensitivity:** Detectable up to 100-1000 CFU/ml (mg).

**Storage:**

The provided kit has a shelf-life of 6 months when stored at -20°C. Repeated thawing and freezing of PCR reagents should be avoided, as this may reduce the sensitivity. If reagents are to be used multiple times, we recommend storing reagents as aliquots to avoid repeated freeze and thaw. Degradation of sample DNA specimens can also reduce sensitivity of the assay. HiMedia does not recommend using the kit after the expiry date stated on pack.

**Quality Control:**

Each lot of HiMedia’s *Cronobacter sakazakii* Detection Kit (Real-time) is assayed for contaminating endonuclease, exonuclease and non-specific DNase activities. Functionally tested in DNA amplification.

**Troubleshooting Guide:**

<table>
<thead>
<tr>
<th>Sr.No.</th>
<th>Problem Description</th>
<th>Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>No amplification</td>
<td>Degraded samples</td>
<td>1. Check the integrity of DNA using agarose gel electrophoresis.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>2. Use freshly prepared DNA to ensure the availability of intact template sequence for efficient amplification.</td>
</tr>
<tr>
<td></td>
<td>Error in protocol setup</td>
<td></td>
<td>Verify that the correct reagent volumes, dilutions and storage conditions have been used.</td>
</tr>
<tr>
<td>2.</td>
<td>Variability between replicates</td>
<td>Error in reaction set-up</td>
<td>Prepare large volume master mix, vortex thoroughly and aliquot into reaction tubes.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Air bubbles in reaction mix</td>
<td>Briefly centrifuge reaction samples/plate prior to running on a real-time PCR instrument.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Pipetting error</td>
<td>C_t values of replicates can show increased variation due to poor laboratory technique or imprecise pipettes.</td>
</tr>
</tbody>
</table>

Safety Information

The Cronobacter sakazakii Detection Kit (Real-time) is for laboratory use only, not for drug, household or other uses. Take appropriate laboratory safety measures and wear gloves when handling.

Product Use Limitation & Warranty

HiMedia guarantees the performance of Cronobacter sakazakii Detection Kit (Real-time) in the manner described in the product literature. The kit is designed, sold for research and for in vitro purposes only. No claim or representation is intended to provide information for the diagnosis, prevention or treatment of a disease.

All due care and attention should be exercised in the handling of the products. We recommend all users of HiMedia products to adhere to the NIH guidelines that have been developed for recombinant DNA experiments, or to other applicable guidelines.

Technical Assistance

At HiMedia, we pride ourselves on the quality and availability of our technical support. For any kind of technical assistance, mail at mb@himedialabs.com.
