NOTE: BSA included in all Reaction Buffer

Source: A *E.coli* strain that carries the Alu I gene from *Arthrobacter luteus*

Recognition Sequence:

5’...A G C T ... 3’

3’...T C G A ... 5’

Concentration: 2 u/μl

Unit Definition:

1 u is defined as the amount of enzyme that is required to digest 1 g of DNA in 1 hour at 37°C in 50ml of assay buffer.

Reaction Buffer:

10X HiBuffer H5:

30mM Tris-acetate (pH 7.9 at 30°C), 10mM Mg-acetate, 60mM K-acetate, and 100 mg/ml BSA.

NOTE: Incubate at 37°C

Storage Buffer:

10mM Tris-HCl (pH 7.5), 300mM NaCl, 0.1mM EDTA, 7mM 2-mercaptoethanol, 200μg/ml BSA and 50% glycerol. Store at ~20°C.

NOTE: 10X HiBuffer DB is provided for double digestion.
Quality Control Assays:

Ligation / Recutting Assay:
After 2-fold over digestion with Alu I, 70% of the DNA fragments can be ligated and recut.

Over digestion Assay:
An unaltered banding pattern was observed after 1 μg of DNA was digested with 4U of Au I for 16 hours at 37°C.

Example of Digestion conditions:
- Enzyme concentration : 1 Unit
- Lambda 0.3 mg/ml : 3.33 μl (1 μg DNA)
- 10X HiBuffer H5 : 5 μl
- Nuclease free water : upto 50 μl

Note:
- Total reaction volume is dependent on the experiment
- The amount of enzyme to be used is dependent on the DNA template
- For plasmid DNA, 5-10X more enzyme is required
- High enzyme concentration may result in Star activity

Storage conditions: Alu I should be stored at -20°C.
