HiCrome™ M-TEC HiCynth™ Broth

Intended Use:
Recommended by the U.S. Environmental Protection Agency (USEPA) for detection of thermotolerant *Escherichia coli* in water by the membrane filtration technique. It can also be used to isolate *E.coli* from clinical samples.

# - Chemically defined peptone

Directions
Suspend 30.6 grams in 1000 ml purified / distilled water. Heat if necessary to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. Cool to 45-50°C and aseptically add desired quantity (2-5 ml of broth) on sterile absorbent cotton pad for saturation. The medium should be used within 24 hours after rehydration.

Principle And Interpretation
HiCrome M-TEC HiCynth™ Broth is a chromogenic media used for detection and enumeration of thermotolerant *E.coli* (TEC) in water by membrane filtration (5). HiCrome™ M-TEC Broth is a modification of the M-TEC Agar developed by Dufour (2). The modified medium contains the chromogen, 5-bromo-6-chloro-3-indolyl-b-D-glucuronide that is cleaved by enzyme 8-D-glucuronidase to yield glucuronic acid, produced by *E.coli* strains. This imparts a purple-magenta colour to the colonies of *E.coli* only.

HiCynth™ Peptone No.3 and HiCynth™ Peptone No.5 provides carbon and nitrogen substances, long chain amino acids, vitamins and essential nutrients. Lactose is the fermentable carbohydrate. Sodium chloride maintains osmotic equilibrium. Potassium dihydrogen phosphate and dipotassium hydrogen phosphate provide strong buffering system to control the pH in the presence of fermentative action. Sodium lauryl sulphate and sodium deoxycholate make the medium more selective by inhibiting gram positive bacteria.

Saturate a sterile cotton absorbent pad with about 2 ml of HiCrome™ M-TEC HiCynth™ Broth. Membrane filter through which water sample has been passed is aseptically placed on the saturated absorbent pad face upwards. This absorbent pad is then incubated at 44.5 ± 0.2°C for 22 - 24 hours. Following incubation *E.coli* will form purple to magenta coloured colonies on the membrane filters.

Type of specimen
Water samples

Specimen Collection and Handling
For water samples, follow appropriate techniques for sample collection, processing as per guidelines and local standards (1). After use, contaminated materials must be sterilized by autoclaving before discarding.
Warning and Precautions

Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling specimens. Safety guidelines may be referred in individual safety data sheets.

Limitations

1. β-glucuronidase is present in 97% of *E.coli* strains, however few *E.coli* may be negative. 2. Some species may show poor growth due to nutritional variations.

Performance and Evaluation

Performance of the medium is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

Quality Control

Appearance
Cream to yellow homogeneous free flowing powder

Colour and Clarity of prepared medium
Light amber coloured clear solution in tubes

Reaction
Reaction of 3.06% w/v aqueous solution at 25°C. pH : 7.3±0.2

pH
7.10-7.50

Cultural Response
Cultural characteristics observed after an incubation at 44.3-44.7°C for 22-24 hours

Storage and Shelf Life

Store dehydrated powder and prepared medium on receipt at 2-8°C. Use before expiry period on the label. On opening, product should be properly stored dry, after tightly capping the bottle in order to prevent lump formation due to the hygroscopic nature of the product. Improper storage of the product may lead to lump formation. Store in dry ventilated area protected from extremes of temperature and sources of ignition Seal the container tightly after use. Use before expiry date on the label. Product performance is best if used within stated expiry period.

Disposal

User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (3,4).
