**MacConkey HiVeg™ Agar, Modified**

**Intended use**

Recommended for isolation of *Klebsiella* species from water samples.

**Composition**

**Directions**

Suspend 50.03 grams in 1000 ml purified/distilled water. Heat to boiling to dissolve the medium completely. DO **NOT** AUTOCLAVE OR OVERHEAT. Cool to 45-50°C and aseptically add two vials of Klebsiella Selective Supplement (FD225). Mix well and pour into sterile Petri plates.

**Principle And Interpretation**

MacConkey Agar is the earliest selective and differential medium for cultivation of enteric microorganisms from a variety of clinical specimens (1, 2). The original medium contains protein, bile salts, sodium chloride and two dyes. The selective action of this medium is attributed to crystal violet and bile salts, which are inhibitory to most species of gram-positive bacteria.

*Klebsiella* species are often associated with coliforms in water supply distribution systems and are present as a major component in industrial wastes of paper mill, textile and other industries. Thom (1970) (3) developed a medium based on MacConkey Agar in which lactose is replaced by inositol with the addition of 100µg of carbenicillin per ml. Bagley and Seidler (1978) (4) devised a similar medium with only 50µg of carbenicillin per ml. In the modified MacConkey agar medium (M051), inositol is incorporated in place of lactose while added carbenicillin makes the medium selective for *Klebsiella* species. Further, this method reduces the necessity for biochemical testing of pure strains; however, preliminary verification of differentiated colonies is recommended. MacConkey HiVeg™ Agar, Modified is same as MacConkey Agar, Modified except that the animal based peptones are completely replaced with vegetable peptones to avoid BSE/TSE risks associated with animal peptones.

HiVeg™ peptone and HiVeg™ peptone no.3 are sources of nitrogen and other nutrients. Inositol is a fermentable carbohydrate, synthetic detergent and crystal violet are selective agents that inhibit growth of gram-positive organisms.

**Type of specimen**

Water samples.

**Specimen Collection and Handling**

For water samples, follow appropriate techniques for sample collection, processing as per guidelines and local standards.(3) After use, contaminated materials must be sterilized by autoclaving before discarding.

**Warning and Precautions :**

Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/ face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling specimens. Safety guidelines may be referred in individual safety data sheets.
Limitations:
1. Though this medium is recommended for the selective isolation of *Klebsiella* species, further biochemical and serological tests should be carried out for confirmation.

Performance and Evaluation
Performance of the medium is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

Quality Control
Appearance
Light yellow to pink homogeneous free flowing powder

Gelling
Firm, comparable with 1.35% Agar gel.

Colour and Clarity of prepared medium
Purplish red coloured clear to slightly opalescent gel forms in Petri plates

Reaction
Reaction of 5.0% w/v aqueous solution at 25°C. pH : 7.1±0.2

pH
6.90-7.30

Cultural Response
Cultural characteristics, after addition of 2vials of Klebsiella Selective Supplement(FD225), observed after an incubation at 35-37°C for 18-24 hours.

Key : *Corresponding WDCM numbers.
# Formerly known as *Enterobacter aerogenes*

Storage and Shelf Life
Store between 10-30°C in a tightly closed container and the prepared medium at 20-30°C. Use before expiry date on the label. On opening, product should be properly stored dry, after tightly capping the bottle in order to prevent lump formation due to the hygroscopic nature of the product. Improper storage of the product may lead to lump formation. Store in dry ventilated area protected from extremes of temperature and sources of ignition Seal the container tightly after use. Use before expiry date on the label. Product performance is best if used within stated expiry period.

Disposal
User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (4,5).
