Brucella HiVeg™ Agar Base

**Intended Use:**
Recommended for enrichment, isolation and cultivation of *Brucella* or *Campylobacter* species from clinical and non-clinical specimens.

**Composition**

**Formula adjusted, standardized to suit performance parameters**

**Directions**

Suspend 21.55 grams in 500 ml purified/distilled water. Heat to boiling to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. Cool to 45-50°C and aseptically add sterile 5% (v/v) inactivated horse serum RM1239 (Inactivate RM1239 by heating at 56°C for 30 minutes) and rehydrated contents of one vial of Brucella Selective Supplement, Modified (FD161). For isolation of Campylobacter species add rehydrated content of one vial of Campylobacter Growth Supplement (FD009), 5-7% defibrinated sheep blood to 500 ml media. Mix well and pour into sterile Petri plates.

**Principle And Interpretation**

*Brucella* are intracellular parasites that cause epizootic abortions in animals and septicemic febrile illness or localized infections of bone, tissue or organ systems in humans (8,12). *Brucella* species are highly fastidious and therefore require a nutrient rich medium to be able to grow.

Also, *Brucella* species are highly infective and so extreme care should be taken while handling. Brucella HiVeg™ Agar Base is used for the isolation and cultivation of *Brucella* species. The basal medium (with addition of Campylobacter Supplements) can be also used for the isolation of Campylobacter (9). Brucella Medium is a modified medium formulated to support luxuriant growth of fastidious bacteria like *Brucella*, Streptococci, Pneumococci, *Listeria*, *Neisseria meningitides* and *Haemophilus influenzae* (4).

Brucella Agar is also recommended by APHA for isolation of *Brucella* species from foods (11). Brucella HiVeg™ Agar Base is same as Brucella Agar except that the animal based peptones are completely replaced by vegetable peptones to avoid the BSE/TSE risks associated with the animal peptones.

HiVeg™ hydrolysate and HiVeg™ peptone provide nitrogen and carbon source, long chain amino acids, vitamins and other essential nutrients. Yeast extract serves as a source of vitamin B complex, and additionally it also supplies some nitrogenous nutrients. Sodium bisulphite is a reducing agent and sodium chloride helps to maintain the osmotic equilibrium of the medium. Dextrose serves as an energy source. The medium can also be enriched with 5% v/v sterile defibrinated horse blood. For selective isolation of *Brucella* species antibiotic mixtures in the form of freeze dried supplements (FD) are incorporated into the base (3,5,10).

**Type of Specimen**

Clinical : Blood

**Specimen Collection and Handling**

For clinical samples follow appropriate techniques for handling specimens as per established guidelines (2,4).

Swab specimens can be directly streaked on the plate. Liquid specimens can be inoculated by means of an inoculation loop. When non-selective medium is required, Brucella Broth Base may be employed with the addition of serum only (i. e. without antibiotics).

Please refer disclaimer Overleaf.
Warning and Precautions
In Vitro diagnostic use. Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling clinical specimens. Safety guidelines may be referred in individual safety data sheets.

Limitations
1. All presumptive anaerobic organisms must be identified by confirmatory test.

Performance and Evaluation
Performance of the medium is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

Quality Control
Appearance
Cream to yellow homogeneous free flowing powder

Gelling
Firm, comparable with 1.5% Agar gel

Colour and Clarity of prepared medium
Yellow coloured, clear to slightly opalescent gel forms in Petri plates

Reaction
Reaction of 4.31% w/v aqueous solution at 25°C. pH : 7.0±0.2

pH
6.80-7.20

Cultural Response
Cultural characteristics observed after an incubation at 35-37°C for 24-72 hours in presence of 10% CO2 with added sterile 5% v/v inactivated horse serum (RM1239) and Brucella Selective Supplement (FD005).

Key : *Corresponding WDCM numbers.

Storage and Shelf Life
Store below 10-30°C in a tightly closed container and the prepared medium at 2-8°C. Use before expiry date on the label. On opening, product should be properly stored dry, after tightly capping the bottle in order to prevent lump formation due to the hygroscopic nature of the product. Improper storage of the product may lead to lump formation. Store in dry ventilated area protected from extremes of temperature and sources of ignition Seal the container tightly after use. Product performance is best if used within stated expiry period.

Disposal
User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (2,4).
