HiCrome ECD HiVeg Agar w/ MUG

HiCrome ECD HiVeg Agar w/ MUG is recommended for the detection of *Escherichia coli* in water and food samples by using a combination of chromogenic and fluorogenic substrate.

**Composition**

**Ingredients** | Gms / Litre
---|---
HiVeg hydrolysate | 20,000
Synthetic detergent | 1,500
Tryptophan | 1,000
Lactose | 5,000
Sodium chloride | 5,000
Dipotassium hydrogen phosphate | 4,000
Potassium dihydrogen phosphate | 1,500
Fluorogenic substrate | 0,070
Chromogenic substrate | 0,100
Agar | 15,000

**Final pH (at 25°C)** | 7.0±0.2

**Formula adjusted, standardized to suit performance parameters**

**Directions**

Suspend 53.17 grams in 1000 ml distilled water. Heat to boiling to dissolve the medium completely. Sterilize by autoclaving at 15 lbs pressure (121°C) for 15 minutes. Mix well and pour in sterile Petri plates.

**Principle And Interpretation**

HiCrome ECD HiVeg Agar w/ MUG is prepared by completely replacing animal based peptones with vegetable peptones thereby making the medium BSE/TSE risk free. HiCrome ECD HiVeg Agar w/ MUG is a slight modification of HiCrome ECD Agar w/ MUG and is recommended for rapid detection of *Escherichia coli* by using a combination of chromogenic and fluorogenic substrates. The presence of *Escherichia coli* is indicated by blue coloured colony formation due to cleavage of chromogenic substrate. Fluorogenic substrate permits rapid detection of *Escherichia coli* when medium is observed for fluorescence using UV light (1,2). Fluorogenic substrate also detects anaerogenic strains, which may not be detected in conventional procedure (1). It is hydrolysed by enzyme beta-D-glucuronidase, possessed by *Escherichia coli* to yield a fluorescent end product. The reaction is indicated by a blue fluorescence under UV light.

HiVeg hydrolysate provides essential nutrients. Lactose is the fermentable carbohydrate. Sodium chloride maintains osmotic equilibrium. The medium has a strong buffering system to control the pH in the presence of fermentive action. Synthetic detergent inhibits gram-positive bacteria especially Bacillus species and faecal Streptococci.

**Quality Control**

**Appearance**
Cream to yellow homogeneous free flowing powder

**Gelling**
Firm, comparable with 1.5% Agar gel

**Colour and Clarity of prepared medium**
Light amber coloured clear to slightly opalescent gel forms in Petri plates

**Reaction**
Reaction of 5.32% w/v aqueous solution at 25°C. pH : 7.0±0.2

**pH**
6.80-7.20

**Cultural Response**
MV1488: Cultural characteristics observed after an incubation at 43 - 45°C for 18 - 24 hours.

### Storage and Shelf Life

Store dehydrated powder and prepared medium at 2-8°C in tightly closed container. Use before expiry period on the label.
