Murashige and Skoog Medium
With Calcium Chloride, Vitamins, Sucrose and CleriGel™

Product Code: PT100G

Product Description:
Murashige and Skoog Medium (MS) was originally formulated by Murashige and Skoog in 1962 to optimize tobacco callus bioassay system for facilitating the study of cytokinins. Since then, it is widely used for micropropagation, organ culture, callus culture and suspension culture. The formulation is a nutrient blend of inorganic salts, vitamins, amino acid, carbohydrate and gelling agent.

Murashige and Skoog Medium (MS) provides all essential macroelements and microelements. Potassium dihydrogen phosphate serves as a source of phosphate. Microelements like Boron, Manganese, Molybdenum, Copper, Iron and Zinc play a vital role in the plant metabolism. Boron enhances the carbohydrate metabolism. Thiamine, pyridoxine, inositol, nicotinic acid acts as enzymatic cofactors in the universal pathways including glycolysis and TCA cycle along with primary and secondary metabolism in the plants. Glycine serves as a source of amino acid.

CleriGel™, a gellan gum is used as an alternative to agar. It offers several advantages over conventional agar as it sets a clear gel which assists easy observation of cultures and their possible contamination. Unlike agar, gel strength of CleriGel™ is unaffected over a wide range of pH and contains no contaminants like phenolic compounds that can be toxic to the plant tissues. It solidifies uniformly and rapidly.

The product is plant tissue culture tested but it is the sole responsibility of the user to ensure the suitability of the medium for individual species.

Composition:
Ingredients            mg/L
MACROELEMENTS
Ammonium nitrate     1650.000
Calcium chloride     332.200
Magnesium sulphate   180.690
Potassium nitrate    1900.000
Potassium phosphate monobasic 170.000
MICROELEMENTS
Boric acid            6.200
Cobalt chloride hexahydrate 0.025
Copper sulphate pentahydrate 0.025
EDTA disodium salt dihydrate 37.300
Ferrous sulphate heptahydrate 27.800
Manganese sulphate monohydrate 16.900
Molybdc acid (sodium salt) 0.213
Potassium Iodide      0.830
Zinc sulphate heptahydrate 8.600
VITAMINS
myo-Inositol          100.000
Nicotinic acid (free acid) 0.500
Pyridoxine HCl        0.500
Thiamine hydrochloride 0.100
AMINO ACID
Glycine               2.000
CARBOHYDRATE
Sucrose               30000.000
GELLING AGENT
CleriGel™ (Gelrite)  30000.000
Total(gms/litre)      37.4

Material required but not provided:
• Autoclaved distilled water
• Plant growth regulators
• 1N NaOH/HCl

Precautions:
• Ensure appropriate pH of the medium before addition of gelling agent as acidic pH will lead to decreased gelation resulting in semi solid flowing gel while alkaline pH will lead to formation of hardened gel.
• Use of Distilled water/Tissue culture grade water is recommended for media preparation as tap water or lower grade water may lead to salt precipitation and improper gelation.
• Avoid preparation of concentrated solutions, as it will lead to precipitation of salts.

Directions:
• Reconstitute medium by adding required quantity of...
powder in two-third of total volume with constant, gentle stirring till the medium gets completely dissolved.  
- Add heat stable supplements prior to autoclaving.  
- Make up the final volume with distilled water.  
- Adjust the pH of the medium to 5.75 ± 0.5 using 1N NaOH/HCl.  
- Heat the medium to boiling till complete dissolution of gelling agent.  
- Sterilize the medium by autoclaving at 15 lbs and 121°C for 15 min.  
- Cool the autoclaved medium to about 45°C before adding heat labile supplements.  
- Aseptically dispense the desired amount of medium under a laminar airflow unit in sterile culture vessels.

**Quality Control:**

**Appearance**  
White to off-white, homogenous, free flowing powder

**Solubility**  
37.4 gms/litre soluble after boiling in distilled water

**Colour and Clarity**  
Colourless to light yellow solution, clear gel is formed on cooling

**Gelling**  
Firm gel formed at pH: 5.75 ± 0.5

**pH at 25°C**  
3.80 - 4.80

**Plant Tissue Culture Test**  
The growth promoting properties of medium is assessed by providing plant cultures with relative humidity of about 60%±2%, temperature 22°C±2°C and photoperiod of about 16:8. The plant species showed actively growing callus and shoots with no structural, necrotic and toxic deformity.

**Storage and Shelf Life:**

- The plant tissue culture medium powders are extremely hygroscopic and must be stored at 2-8°C in air tight containers.  
- Preferably, entire content of each package should be used immediately after opening.  
- Use before the expiry date.

Revision : 01 / 2017
