Standard Solution for conductivity 12880 µS/cm

Intended Use:
Standard Solution for conductivity 12880 µS/cm is used as standard solution for measurement of conductivity in calibration.

Composition**

**Formula adjusted, standardized to suit performance parameters

Principle And Interpretation
A conductivity standard is an electrolyte solution with an accurately known electrolytic conductivity. Accuracy of conductivity depends on the conductivity measuring equipment and the application of appropriate standards.

Warning and Precautions
In Vitro diagnostic use only. Read the label before opening the container. Wear protective gloves/protective clothing/eye protection/face protection. Follow good microbiological lab practices while handling specimens and culture. Standard precautions as per established guidelines should be followed while handling clinical specimens. Safety guidelines may be referred in individual safety data sheets.

Performance and Evaluation
Performace of the product is expected when used as per the direction on the label within the expiry period when stored at recommended temperature.

Quality Control
Appearance
Colourless solution.

Clarity
Clear with no insoluble particles.

Conductivity
12880 µS/cm

Storage and Shelf Life
On receipt store between 2-8°C in tightly closed container and away from bright light. Use before expiry date on label. On opening, product should be properly stored in dry ventilated area protected from extremes of temperature and sources of ignition. Seal the container tightly after use.

Disposal
User must ensure safe disposal by autoclaving and/or incineration of used or unusable preparations of this product. Follow established laboratory procedures in disposing of infectious materials and material that comes into contact with clinical sample must be decontaminated and disposed of in accordance with current laboratory techniques (2,3).
