Goat Serum

Product Code: RM10701

Product Description:
Goat serum is derived from clotted blood collected from healthy donor goats.

Applications:
- Used as a blocking agent and negative control in immunoassays
- Used as an effective replacement of FBS for various biomedical research applications such as isolation and identification of viruses, in vitro cultivation of malarial parasite, cultivation of primary cell lines, organ culture.

Quality Control:
Physical and Chemical analysis:
- Appearance: Clear straw to dark red liquid
- pH: Value
- Osmolality: Value mOsm/KgH₂O
- Endotoxin: Value EU/ml
- Hemoglobin: Value mg/dl

Protein:
- Total protein: Value g/l

Sterility Testing:
- Aerobic bacteria: Not detected
- Anaerobic bacteria: Not detected
- Fungi: Not detected
- Mycoplasma: Not detected

Growth promotion and cytotoxicity:
Each lot of serum is tested for growth promotion and cytotoxicity. Growth promotion ability of serum is assessed by supplementing medium with 10% serum and analyzing the cell lines qualitatively for morphology and quantitatively by estimating cell counts through minimum three subcultures.

Storage and Shelf Life:
Store at -10°C to -40°C away from bright light. Shelf life of the product is 48 months. Thawed serum can be stored at 2-8°C up to four weeks.

Note on Cryoprecipitate:
We advise our users to follow the recommended thawing procedure. Proper thawing with periodic agitation is crucial to a serum’s optimum performance. If bottle of serum is not frequently swirled during thawing, the released proteins and salts tend to form crystalline or flocculent precipitates. These cryoprecipitates are not detrimental to the performance of serum but might affect serum’s appearance and consistency. Slight turbidity or small amount of flocculent material is normal in most serum products and will not affect its performance in any manner. Filtering serum to remove cryoprecipitate is not recommended and could result in loss of nutrients.

Directions for Thawing of Serum:
Thawing of the sera should be done as quickly as possible in order to minimize the period of time during which elevated salt concentration prevail in the thawed liquid.
1. Remove the bottles from the freezer and allow them to acclimatize at room temperature for 10 minutes and keep in 2-8°C overnight in refrigerator.
   - Note: Do not place the serum in the water bath or incubator. Avoid exposing serum to elevated temperatures as this can lead to degradation of heat labile nutrients.
2. Swirl the bottle of serum frequently during thawing to disperse the released salts and proteins uniformly in the liquid.

Please refer disclaimer overleaf
ice deposits and this might lead to multiple thawing of serum.

To avoid multiple freeze-thaw cycles or long periods of refrigeration, we recommend freezing small aliquots which can be thawed and used as required.

Use before expiry date given on the label.
