Murashige and Skoog Macroelements

Product Code: TS1068

Product Description:
Murashige and Skoog Medium (MS) was originally formulated by Murashige and Skoog in 1962 to optimize tobacco callus bioassay system for facilitating the study of cytokinins. Since then, it is widely used for micropropagation, organ culture, callus culture and suspension culture.

Murashige and Skoog Macromolecular is a nutrient blend of inorganic salts which provides all essential macronutrients to the plant. Potassium dihydrogen phosphate serves as a source of phosphorus. Potassium nitrate and ammonium nitrate stimulate morphogenesis and embryogenesis. Magnesium and sulphur act as precursors in many vital metabolic processes and is supplied to the plants in the form of magnesium sulphate. Magnesium also helps to maintain cation-anion balance. Calcium serves as an important modulator in enzymatic reactions and is required for cell wall synthesis and stabilization.

The product is plant tissue culture tested but it is the sole responsibility of the user to ensure the suitability of the medium for individual species.

Material required but not provided:
- Sucrose (PCT0607)
- Plant growth regulators
- Gelling agents like Agar (PCT0901) or CleriGel™ (PCT0903)
- 1N NaOH/HCl

Precautions:
- Ensure appropriate pH of the medium before addition of gelling agent as acidic pH will lead to decreased gelation resulting in semi solid flowing gel while alkaline pH will lead to formation of hardened gel.
- Use of Distilled water/Tissue culture grade water is recommended for media preparation as tap water or lower grade water may lead to salt precipitation and improper gelation.
- Avoid preparation of concentrated solutions, as it will lead to precipitation of salts.

Directions:
- Reconstitute powder by adding required quantity of powder in two-third of total volume with constant, gentle stirring till the powder gets completely dissolved.
- Add heat stable supplements prior to autoclaving.
- Make up the final volume with distilled water.
- Adjust the pH of the medium to 5.75 ± 0.5 using 1N NaOH/HCl.
- Add gelling agent and heat the medium to boiling till complete dissolution of gelling agent.
- Sterilize the medium by autoclaving at 15 lbs and 121°C for 15 min.
- Cool the autoclaved medium to about 45°C before adding heat labile supplements.
- Aseptically dispense the desired amount of medium under a laminar airflow unit in sterile culture vessels.

Quality Control:

Appearance
White to off-white, homogenous, free flowing powder

Solubility
4.2 gms/litre soluble in distilled water
Colour and Clarity
Colourless to light yellow, clear solution

pH at 25°C
4.40 - 5.40

Plant Tissue Culture Test
The growth promoting property of macroelements is assessed by adding required supplements to make a complete medium and testing for culture performance. Culture test is done by providing plant cultures with relative humidity of about 60% ±2%, temperature 22°C±2°C and photoperiod of about 16:8. The plant species showed actively growing callus and shoots with no structural, necrotic and toxic deformity.

Storage and Shelf Life:
• The plant tissue macroelements powder is extremely hygroscopic and must be stored at 2-8°C in air tight containers.
• Preferably, entire content of each package should be used immediately after opening.
• Use before the expiry date.

Revision : 01 / 2017
