

Iscove's Modified Dulbecco's Medium (IMDM)

With Sodium bicarbonate and 25mM HEPES buffer

Without L-Glutamine

Hybridoma Tested

1X Liquid cell Culture Medium

Product Code: AL070B

Product Description :

Iscove's Modified Dulbecco's Medium (IMDM) is an enriched modification of Dulbecco's Modified Eagle's Medium wherein serum can be partially or totally replaced by chemically defined substances. The medium contains additional amino acids, sodium selenite, sodium pyruvate, vitamins and inorganic salts. Potassium nitrate is substituted by ferric nitrate. IMDM was the first medium utilizing HEPES buffer. The medium when appropriately supplemented supports good growth of precursor cells of erythrocytes and macrophages. The medium also supports good growth of T and B lymphocytes and a variety of hybrid cells under serum free or reduced serum conditions.

AL070B is Iscove's Modified Dulbecco's Medium with 25mM HEPES buffer and sodium bicarbonate. It does not contain L-Glutamine. This medium is hybridoma tested. HEPES, a zwitterionic buffer having a pKa of 7.3 at 37°C prevents the initial rise in pH that tends to occur at the initiation of a culture and increases the buffering capacity of the medium. Users are advised to review the literature for recommendations regarding medium supplementation and physiological growth requirements specific for different cell lines.
